Selecting Refrigeration	1
There are four categories of refrigeration on boats.	1
Selecting a refrigeration conversion	1
Insulation	1
The correct size compressor is the key	1
Component enhancements for the BD compressors	2
Alternating current hermetically sealed compressors	2
Engine Driven Compressors	3
Large 12/24-volt compressors	3
Holding Plates containing eutectic solutions	3
Deciding between water-cooled refrigeration or air-cooled	4
Eutectic solution heat absorption comparison	4
Evaporators	5
Is a full box more efficient than an empty box?	6
Is the new 134a refrigerant less efficient than R-12 when used in boat refrigeration?	6
A small fan in the refrigerator box to improve air circulation	6
Air or Water Cooled Refrigeration	11
Insulation	15
Moisture protection	16
Radiant heat reflector	16
Ways to check your box's insulation	16
Adding foam to your box	16
Hints for improving refrigeration	17
Refrigerants	20
The author's summary	20
Author's recommendations	20
Confusion in interpreting the EPA regulations	21
Choosing and using alternative refrigerants	22
Significant New Alternatives Policy (SNAP)	22
Misleading Use of "Drop-in" to Describe Refrigerants	22
Remove original refrigerant	23
How much will the alternative refrigerant cost?	24
What equipment must be used with the alternative refrigerant?	25
Is the alternative refrigerant flammable?	25
Is the refrigerant readily and widely available?	25
What is my liability if I sell an alternative not yet listed as acceptable by EPA or if I put it in a customer's system? ..	25
Danfoss 12/24-volt systems	28
Performance Comparison Between BD3 and BD35F Compressors	30
Performance Comparison Between BD35 and BD50 Compressors	30
Should we be concerned about compressor speeds?	31
Electrical diagram for BD35F and BD50F compressors	31

Field test of Isotherm’s ASU automatic speed control.....	32
Isotherm with ASU Figure #2	32
Smart Speed Control device	34
SSC in Auto Mode	34
SSC in Manual Mode	34
Test evaluation on Frigoboat’s Smart Speed Control (SSC)	34
Refrigeration System Performance	37
Actual performance measuring of different 12-volt systems	38
Thermostat and Resistor	38
New box and replacement WAECO Condensing unit	39
Eighteen year old six cubic ft. refrigerated box performance test	40
Engel Refrigerator Box Unit Tests	41
Testing a newly constructed box using Heat Shield Insulation	41
Fan Cooling Enhancements	42
Gadgets that enhance performance on BD 2.5 and BD 3 compressors.	42
Refrigerator Running Indicator LED	43
Gadgets for the new BD35 and BD50 compressors	43
Speed Increase when charge voltage is present	44
Start unit when a charge voltage is present.....	44
High box temperature controllable compressor speed up.	44
Single resistor change for speed shift	45
Adler/Barbour’s Additional Circuit Board	46
Trouble Shooting	48
New BD35 and BD50 modules	49
Decal on new BD compressor	49
Troubleshooting guide	49
Problems and Solutions	52
Servicing and Maintenance of Small 12-Volt Units	55
Simple ways to determine refrigerant charge	55
Effects of refrigerant charge on performance	55
Refrigerant leaks	56
24 hour tests adjusting refrigerant charges	57
Finding a leak	57
Preservicing information	57
Self-piercing Valve	57
Standard Servicing Port	57
Servicing Adapter	57
Acme Fitting	57
Female Disconnect for servicing	57
Tools and materials needed to service small refrigeration units	58
Servicing a small refrigeration system with capillary tubes	58
Beginning the servicing process on a small compressor with a capillary tube expansion device	58
Air and moisture in the system	59
Removing moisture with a vacuum pump	59
Typical Electrical Diagrams	60
DC Power management and Performance	65

Batteries.....	65
The best deep-cycle battery	66
Capacity of deep cycle batteries	66
How to determine a battery's actual capacity	66
